Inclusive Infrastructure Development for North East India

S.N. Brohmo Choudhury and Sonal Dhingra

There is broad consensus that infrastructure contributes to growth and development. It also helps in improving productivity, increasing the durability of private capital and markedly improving health and educational outcomes in long run. However, there is huge detraction in potential investment due to poor infrastructural management, irregular revenue flows, and high-risk perception emanating from long gestation periods. Financial support for infrastructure development is limited and primarily depends on annual budgetary support. The capacity of the Central and state governments to fund infrastructure creation can vary substantially over time thus making long-term planning challenging. Connectivity is one of the biggest development challenges for the States in the North East India due to which intra and inter regional connectivity is fragile. Resource generation capacity of these smaller States does not coexist with the establishment cost leaving barely any scope for infrastructure development. These States should strengthen their efforts to optimize resource generation capacity. It is generally believed that unless the physical infrastructure is created and connectivity is established, 'Look East' policy will remain difficult to accomplish.

Development efforts of the states of North Eastern Region (NER) are being supplemented by Central Assistance under the State Plans in order to minimize certain distinct geo-physical & historical constraints by addressing the local requirements. The major policy announcement under 'New Initiatives for the NER' in 1996 included a number of measures which covered special area development projects in key sectors. 10% earmarking of Plan Budget of the Central Ministries and creation of a Non-Lapsable Pool out of the earmarked fund are the outcome of this. In fact, it is only during the latter part of 9th Plan when action for identification of infrastructure deficit in the key areas, resulted in prioritization of projects. Along with this, investment in Human Resource and skills also became the key focus for development.

Due to constant efforts on the part of the Central and the local Government and interactions with various stakeholders, the law and order situation is gradually improving in the region. This has helped in implementation of projects during the 10th Plan period. Regular monitoring system at the apex level has paved path for resolving some of the project specific problems like land acquisition, forest clearance etc. Substantial step-up in the Central Assistance to the States Plan during 10th and 11th Plan along with implementation monitoring has helped developing local infrastructure. This has generated economic activities in the States as reflected in the growth.

The growth rate of 5.3% in the 9th Plan improved to 6.2% in the 10th Plan. The average GSDP growth of NER during 11th Plan was 9.8% as against the national average of 8.0%. Even if the exceptional growth of Sikkim (22%) is

excluded, the NER average is (7.9%), much above the earlier plans.

Expedition completion of ongoing central sector projects (roads, rail, airport, telecom and power) has been emphasized in the 12th Plan. States of NER have been expressing concerns about the slow progress of major connectivity and power projects that is effecting private investment despite having huge potential for trade and commerce. Special fiscal package under NEIP (North East Industrial Policy) has not triggered much investment flows as expected. At the National level, based on letter of intent data, the share of private investment in NE is less than 0.6%.

The progress of ongoing projects to upgrade physical infrastructure in NER, was reviewed by Prime Minister on 18th July, 2013. This was followed by regular reviews by all the concerned Ministries. From these reviews it was observed that some of the projects are nearing completion, but a few projects are delayed because of problems like site selection, land acquisition, environmental and forest clearance, shortage of fund, security related issues etc. Hence the government has decided to accelerate completion of three critical rail projects (i) Harmuti - Naharlagun (Arunachal Pradesh), (ii) Dudhnoi Mendipathar (Meghalaya), (iii) Rangapara-North Lakhimpur (Assam) before March, 2014. Additional resources, if required will also be provided to meet the specific requirements of two important projects i.e. a) Lumding - Silchar b) Bogibeel Bridge to complete stipulated milestone (June, 2015 and March, 2016 respectively).

For major road programmes like East-West Corridor, Special Accelerated Road Development Programme for North-East, SARDP-NE (Phase-A), trans

Arunachal Highway along with district connectivity, the focus is on speedy implementation of existing projects by strengthening road execution capabilities on the ground. Dhola-Sadia Bridge, connecting the National Highways on North and South Bank of River Brahmaputra, are being expedited which will largely benefit the Dibang, Pasighat, Roing areas of Arunachal Pradesh. Simultaneously, Jiribam-Imphal (NH-53) in Manipur, NH-44 in Tripura, Lawngtlai to the Myanmar border (part of SARDP-NE-Phase A) in Mizoram are being monitored regularly. These are important connectivity in order to enhance access to NER through Myanmar and Bangladesh.

In the power sector, there are two important Thermal Power projects i.e. Palatana (726 MW) and Bongaigaon (750 MW) which are nearing completion. These projects along with the transmission lines taken up with World Bank assistance are going to improve the availability of power, to some extent. Various Committees are resolving the issues of Lower Subansiri (2000 MW) project work so that it can be resumed as early as possible. Efforts are on to settle those issues by the end of this year. Once completed, this project can address major power deficit of the region.

Expanded infrastructure investments would have significant benefits beyond improving productivity and overall economic growth. Sustained over time, it would raise the annual growth rate and would contribute to the nation's gross domestic product.

(S.N. Brohmo Choudhury is Adviser, Planning Commission and Sonal Dhingra is a Young Professional, Planning Commission, New Delhi)

IMPORTANT NOTICE

NEW RATE

The DAVP Rates for advertisements published in Employment News is revised to Rs. 190.44 per sq. cm. The rate shall be applicable w.e.f. 7 December 2013 issue of ENIRS. All the advertisers are requested to take note of this and make payment accordingly.

JOB HIGHLIGHTS

RAILWAY

● Western Railway, Mumbai requires 5775 Gangman/Trackman, Helper, Khalasi etc.
Last Date : 14.01.2014

BANK

● J&K Grameen Bank, Jammu requires 248 Officer Scale-I and Office Assistant (Multipurpose)
Last Date : 12.12.2013
● Prathama Bank, Moradabad requires 138 Officer Scale-III, Officer Scale-II, Officer Scale-I and Office Assistant (Multipurpose)
Last Date : 11.12.2013

SSC

● Staff Selection Commission, Western Region requires 195 Assistant Plant Protection Officer, Investigator and Data Entry Operator Grade 'B'
Last Date : 27.12.2013

Career in Mechatronics

Mechatronics is all about electrical and electronic aspects of mechanical engineering. In simple terms, it deals with building mechanical systems controlled by electronics and computer systems. Mechatronics is relevantly a new branch of engineering that is gaining wide acceptance in many fields. It is an interdisciplinary science of electrical engineering, electronics, mechanical and computer science engineering. The aim of Mechatronics is to build intelligent systems - simple, easy to use, cost-effective and reliable systems. Industrial robotics is a classic example of a mechatronics system. In fact, application of Mechatronics reflects on the inner working of a variety of devices - as simple as mobile phones to washing machines, chemical plant machinery, power generators, auto-focus cameras and robots.

Application of Mechatronics
Mechatronics engineers are responsible for designing hybrid systems - mechanical systems with enhanced functionality. They apply their knowledge in mechanics, electronics, computer science and control theory to improve products, processes and services across a variety of industries.

Mechatronics engineers

- Design and develop intelligent systems and smart devices for automation of industrial tasks
- Research and explore solutions to challenges in industrial automation
- Maintain and improve industrial manufacturing processes
- Build prototypes of mechatronic equipment that are both efficient and cost-effective
- Design and manufacture consumer products like video recorders, targeted at enhancing user experience
- Devise processes to replace human intervention in dangerous tasks such as mining
- Perform feasibility studies and plan budgets
- Outline safety processes
- Document their work

With engineering fields collaborating like never before, new interdisciplinary fields like robotics are emerging. Industries are applying evolutionary advances in other fields to their practices and procedures. The need to implement projects with limited resources is increasing. Hence, Mechatronics is here to stay. Mechatronics finds application in a num-

ber of fields including automobile engineering, biomedical instrumentation, industrial automation, robotics, avionics, data communication networks, embedded and real-time systems, smart infrastructure, human-machine interface engineering and motion control, where electronic performance of the mechanical equipment has to be enhanced. Mechatronics is the technology behind systems that monitor process plants for leaks and faults. Anti-lock brakes are based on this technology. Flight simulators too are products of mechatronics engineering.

Study options

Mechatronics is open to candidates from a variety of educational backgrounds like Mechanical, Electrical, Electronics, Biomedical, Communications, Instrumentation, Industrial, Manufacturing, Production, Space and Chemical Engineering.

Mechatronics as an academic option is available at diploma, bachelor's and post-graduate levels. A diploma level course can help people with engineering background pick up basics of Mechatronics and

Continued on page 72

Career in..

Continued from page 1

apply it to their work. A bachelor's degree will provide strong foundation of concepts and theories required to begin a career in the field of Mechatronics. M.Tech programmes throw light on how Mechatronics can be applied to various fields. The course covers topics like Autotronics and Vehicle Intelligence, Robot Dynamics and Analysis, Fuzzy Logic and Neural Networks, Mechatronics System Design and Digital Control Systems.

Keeping in mind the fact that Mechatronics is also an application science, you may opt to pursue it at postgraduate level, after your B.Tech in core engineering streams like Electronics or Mechanical Engineering. This way, you will gain a good deal of experience with dynamic systems and you will be in a better position to understand and appreciate the influence Mechatronics can have.

Skills required

To begin your career in the field of Mechatronics, you have to gain sound technical skills. Excellent knowledge of Physics, Digital Systems Design, Mechatronics Modelling, Electro-magnetics, Manufacturing Processes, Decision-making Theories and Circuit Analysis is a must.

Work in the field of Mechatronics involves collaborating with professionals in other fields like mechanical engineers and software developers, to address challenges in cross-disciplinary boundaries. So, good communication skills are mandatory. Also, skills like ability to work in teams, multitasking, handling work pressure, thinking out of box and solving problems are required.

The work

Mechatronics engineers work in places like processing plants, engineering design offices, laboratories and factories. Fields in which mechatronics engineers can find employment are robotics, automobiles, bioengineering, nanotechnology, aerospace, consumer products, embedded systems, manufacturing, mining, forestry, defence, electronics and communications. Research organisations and educational institutions also employ Mechatronics engineers.

Colleges and Courses

Course	College	Eligibility	Admission	Website
M.Tech in Mechatronics	VIT University, Vellore	50 per cent marks in Bachelor's Degree in Mechanical Engineering, Electrical and Electronics engineering, Electronics and Communication Engineering, Automobile Engineering, Computer Science and Engineering	Performance at entrance test/ GATE	www.vit.ac.in

Course	College	Eligibility	Admission	Website
M.Tech in Mechatronics	Amity University, Noida	BE/ B. Tech/ AMIE in Mechanical/ Electronics and Communication or Electrical and Electronics Engineering with at least 60 per cent and minimum 60 per cent marks in +2	Performance at entrance test	www.amity.edu
M.Tech in Mechatronics	Indian Institute of Information Technology, Design and Manufacturing, Jabalpur	Bachelor's Degree in Mechanical Engineering, Electrical and Electronics Engineering, Electronics and Communication Engineering, Automobile Engineering, Production Engineering, Computer Science and Engineering	Performance at entrance test/GATE	www.iitdmj.ac.in
M.Tech in Mechatronics	Bengal Engineering and Science University, Shibpur, West Bengal	60 per cent marks in BE/ B.Tech in Mechanical/ Mechatronics/ Production/ Automobile/ Manufacturing/ Aeronautical/ Electrical/ Electronics/ Telecommunication/ Instrumentation/ Control Engineering	Performance at entrance test	www.becs.ac.in
B.Tech Mechatronics Engineering	SRM University, Tamil Nadu	10+2 with Mathematics, Physics and Chemistry as subjects	Performance at entrance test	www.srmuniv.ac.in
B.Tech Mechatronics	Vignana University, Andhra Pradesh	10+2 with Mathematics, Physics and Chemistry as subjects	Performance at entrance test	www.vignanuniversity.org
Diploma in Mechatronics	Geedee Technical Training Institute (GTTI), Coimbatore	SSLC/ Matriculation/ HSC	Performance at entrance test	www.gttiinfo.com
Diploma in Mechatronics Engineering	KMG Polytechnic, Tamil Nadu	10th/ SSC/ Matric/ CBSC/ ANGLO	Academic record	www.kmgpolytechnic.com

North-Eastern States gear up for implementation of Food Security Act

A meeting with Food Ministers of North Eastern States including Sikkim was held recently at Guwahati to review the preparedness for implementation of the National Food Security Act. Various aspects of Strengthening of Targeted Public Distribution System (TPDS) such as creation of additional storage facilities, doorstep delivery of foodgrains and computerization of TPDS were also discussed in detail, keeping in view the special circumstances of the North Eastern States in terms of terrain, accessibility, transportation of foodgrains, storage facilities etc.

The meetings was chaired by Prof. K.V.Thomas, Union Minister for Consumer Affairs, Food and Public Distribution and Food Ministers of Assam, Arunachal Pradesh, Manipur, Meghalaya, Sikkim and Tripura attended the meeting, besides the Principal Secretaries/Secretaries in charge of Food and Public Distribution in all the NE States and other senior officers. The States indicated that implementation would begin by March 2014 or latest by middle of 2014.

Prof. Thomas explained that not only allocation of foodgrains of all the states under National Food Security Act would be higher than what States are currently receiving for BPL and AAY households under existing TPDS. It will be at highly subsidized prices of Rs. 2/3 per Kg for wheat/rice whereas existing issue price for BPL allocation is much higher. In a related development, Food Corporation of India (FCI) is establishing an administrative unit in Guwahati for smooth implementation of Food Security Act. At present, there are 77 FCI depots operational with capacity of 468000 MT in North East. Besides this 20 projects currently under construction in Assam, Arunachal Pradesh, Manipur, Meghalaya, Nagaland and Tripura that will augment storage capacity by about 125060 MT, out of which 53000 MT likely to be completed by March 2014.

From 1st December, 2013 onward E-version facility of Employment News (English)/Rozgar Samachar (Hindi & Urdu) will be available for individual subscribers only.

2000 SCHOLARSHIPS FOR STUDENT WITH DISABILITIES

- Scholarships for Professional & Technical courses.
- For Graduate & Post Graduate courses.
- Covers Admission fee, Tuition fee, Maintenance allowances, Hostel Fee.
- Income not more than Rs.3 lakh/1.80 lakh p.a. respectively for two types of scholarships.
- Apply online on our website : www.nhfdc.nic.in
